NOUFAN TN

Muvattupuzha, Kerala, India | noufanntn@gmail.com | linkedin.com/in/noufan-tnb14653353

Professional Summary

Cybersecurity-focused MSc Computer Science student at Kerala University of Digital Sciences, Innovation & Technology, with a strong analytical foundation from a BSc in Physics with Electronics. Skilled in network security, ethical hacking, cryptography, and threat detection using industry-standard tools. Seeking internships, entry-level roles, or project-based opportunities in cybersecurity to apply skills in network security, threat detection, vulnerability assessment, and secure system design across diverse organizational environments.

Education

Kerala University of Digital Sciences, Innovation & Technology July 2025 – September 2027
MSc Computer Science, Specialization: Cybersecurity | Digital University Kerala *Thiruvananthapuram, Kerala*

Nirmala College, Muvattupuzha September 2022 – May 2025
Bachelor of Science – Physics with Electronics *Muvattupuzha, Kerala*

- Strong grounding in analytical mathematics, electronic circuits, hardware-software systems, and IoT concepts.

Technical Skills

Cybersecurity:	Ethical Hacking, Network Security, Threat Detection, Vulnerability Assessment, Cryptography
Tools & Platforms:	Kali Linux, Wireshark, Cisco Packet Tracer, VirtualBox/VMware (Virtualized Environments)
Networking:	TCP/IP, DNS, HTTP/S, Firewalls, Intrusion Detection, Packet Analysis
Programming:	Python (Scripting & Automation)
Concepts:	Secure System Design, Risk Assessment, IoT Security, Digital Forensics (Fundamentals)
Soft Skills:	Analytical Thinking, Problem Solving, Continuous Learning, Team Collaboration

Certifications

- **Ethical Hacking with Kali Linux** – Hands-on penetration testing techniques including reconnaissance, exploitation, and post-exploitation using Kali Linux tools.
- **Introduction to Cybersecurity** – Foundational cybersecurity concepts covering network security, threat landscapes, and data protection principles.

Projects & Lab Experience

Network Traffic Analysis & Intrusion Detection Lab MSc Cybersecurity Project
- Captured and analyzed live network packets using Wireshark to identify anomalous traffic patterns and potential threats.
- Simulated network topologies in Cisco Packet Tracer to study firewall configurations and intrusion prevention techniques.
- Documented findings in structured security reports, simulating real-world SOC analyst workflows.

Ethical Hacking & Penetration Testing (Lab Environment) Self-Directed — Kali Linux
- Performed reconnaissance, vulnerability scanning, and exploitation in controlled virtualized environments using Kali Linux.
- Practiced common attack vectors including brute-force, phishing simulation, and privilege escalation in sandboxed VMs.

IoT Security & Hardware-Software Interaction Study BSc Electronics Background
- Leveraged electronics and circuit knowledge to analyze hardware-level attack surfaces in IoT devices.
- Investigated firmware-level vulnerabilities and basic hardware security concepts as part of personal research.

Relevant Coursework

Network Security & Architecture	Cryptography & Data Security	Operating Systems Security
Computer Networks (TCP/IP)	Ethical Hacking Fundamentals	Secure System Design
Cyber Threat Intelligence	Risk & Vulnerability Management	

Areas of Interest

- **Cybersecurity Consulting & Risk Management:** Passionate about helping organizations identify, assess, and mitigate cyber risks through structured security frameworks and best practices.
- **Digital Trust & Compliance:** Keen interest in regulatory frameworks such as GDPR and ISO 27001, and in building secure, compliant digital infrastructures across industries.
- **Threat Intelligence & Incident Response:** Focused on proactive threat detection, vulnerability management, and effective incident response strategies in organizational environments.
